I ship production systems — research infrastructure that labs at the Technion and DESY run on, and platforms with real users behind them.

ENGINEERING

Lead Developer, Peptide Visual Lab (PVL)

Sep 2025 – present

Technion (Prof. Meytal Landau) / DESY-CSSB, Hamburg • 20 hr/wk, paid

- With zero biology background, learned the science from postdocs and shipped a working prototype in **two weeks**. Prof. Landau hired me on the spot.
- Built a React + FastAPI platform unifying protein-structure predictors (TANGO, S4PRED) into one interface, replacing weeks of manual spreadsheet analysis with minutes of visual exploration.
- Ships as a five-service container stack — FastAPI, Redis, two Celery workers, nginx — behind **seven GitHub Actions workflows** with CodeQL, Sentry, and ~1,220 automated tests (pytest + vitest).
- Migrated off managed cloud (Vercel/Railway/Supabase) to self-hosted container infrastructure, cutting hosting by **\$600+/month**. Adopted by HIFIS (Helmholtz Association) after multiple evaluation rounds.
- Published **two PyPI packages** (pvl-cli, pvl-mcp) and GHCR images with SLSA Level 2 build provenance. MIT-licensed; methods paper in preparation.

Technical Product Manager & Sole Developer, MEET Crowdfunding

2026

React, TypeScript, Supabase, Cloudflare

- Built and shipped the platform solo in **44 days** — **7,000+ users across 14 student startups**, three languages with full RTL support.
- Owned the whole surface: schema and row-level security, auth, payments logic, deploy pipeline, and the staff-facing admin console.

Co-Founder & CTO, RoofMate

Jan 2024 – present

AppsFlyer Accelerator • 20 hr/wk

- Led an **11-person team** to ship the Android MVP: 500+ signups, 4 university partnerships, Haifa pilot planned.
- Architected the matching engine on MongoDB vector search and HuggingFace embeddings — compatibility scored on interests and habits, not demographics.

Platform Engineer, MEET Automation Platform

2026

- Built the internal automation platform — **10 plugins, 35 skills** for instructor feedback and submission scoring — running at \$75/month against a \$5,600/year commercial equivalent.

Team Lead, Shaman — 1st Place, HUJI AI Hackathon

2025

- Assistant that reads government PDFs and fills forms in Arabic or Hebrew through chat. Learned React and TypeScript from scratch and won in **36 hours**; the hackathon was originally restricted to bachelor's holders.

Cancer Database System

Feb 2026 – present

- Built a secure longitudinal patient database for a pulmonologist, tracking smoking-related respiratory malignancies and disease-progression correlations under real clinical-privacy constraints.

EDUCATION

Massachusetts Institute of Technology

Fall 2026 – 2030

- B.S. in Computer Science, Economics, and Data Science (Course 6-14). Fall term: 18.02, 8.01, 14.01, 6.1200.
- Advanced Standing Exam credit earned in **18.01** and **6.100A** before matriculation. DEAL FPOP alumnus, Martin Trust Center.

Hebrew University Secondary School (Leyada)

2019 – 2025

- **Top 0.1% national rank**, 118.1/100 Technion weighted Bagrut average. Bagrut: Math 100, Physics 99, CS 99. SAT Math 800.

TEACHING & SELECTION

- **CS Instructor, MEET** (Jul 2025 – present) — hand-selected by the CEO from the TA cohort; taught **120 students** in Flask, Firebase, and applied AI. Co-designed the first fundamental redesign of the Y2 curriculum since 2015.
- **ML Intern, BetterMind Labs** (Jul 2025 – present) — advanced to the 12-week Advanced Track: **top 9 of ~1,100 applicants**.
- **Sharpies Elite Tech Talent Cohort** (May 2025) — declined placement to lead PVL development at the Technion full-time.

TECHNICAL SKILLS

Languages: Python, JavaScript/TypeScript, Java, SQL, HTML/CSS

Frontend: React, React Native, Next.js, Vite, Tailwind, Android Studio (Java/XML)

Backend & Data: FastAPI, Flask, Node.js, Celery, Redis, PostgreSQL, MongoDB, Supabase, Firebase, SQLite

Infrastructure: Docker, Kubernetes, ArgoCD, Rancher, GitHub Actions, Nginx, Caddy, Cloudflare, Vercel, Sentry, CodeQL

ML: HuggingFace (embeddings, transformers), PyTorch, S4PRED, TANGO, Model Context Protocol
